INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

PCT/EP2004/008513

International application No.

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- 1. Reference is made to the following documents:
 - D1: WO 03/042175 A (ESTEVE LABOR DR) 22 May 2003 (2003-05-22)
 - D2: EP-A-0 815 861 (HOFFMANN LA ROCHE) 7 January 1998 (1998-01-07)
 - D3: WO 02/060871 A (FLAUGH MICHAEL EDWARD ; GILLIG JAMES RONALD (US); HEINZ LAWRENCE JOSEP) 8 August 2002 (2002-08-08)
 - D4: US-A-3 472 870 (GOULD BARBARA E ET AL) 14 October 1969 (1969-10-14)
 - D5: PATENT ABSTRACTS OF JAPAN vol. 2002, no. 10, 10 October 2002 (2002-10-10) & JP 2002 167376 A (MERCIAN CORP), 11 June 2002 (2002-06-11)
 - D6: US-B-6 448 2431 (KITAZAWA NORITAKA ET AL) 10 September 2002 (2002-09-10)
- 2. Novelty (Article 33(1) and (2)PCT)

The present application discloses compounds of formula (la-b) (see present Claims 1, 9), which are useful as 5-HT-6 modulators.

The present compounds (see Claims 1 and 9) differ form the D1-D2 compounds on the account of the position 7 of substitution with sulfonamide moiety on the indole ring (instead of the 5-th position for the D1 compounds and 4-th position for the D0 compounds), from the D3 compounds on the account of the sulfonamide moiety (see Claim 1), from the D4 and D6 compounds (example 322) on the account of the A substituent of the sulfonamide function (which in the present case should contain a (hetero)aromatic ring and in D4, D6 case is an alkyl or alkenyl chain) and from D5 compounds on the account of the present R1 substituent. Consequently, the novelty of the present subject-matter is acknowledged.

3. Inventive step (Article 33(1) and 33(3) PCT)

The present application discloses 7-sulfonamidoindoles which are substituted on

position 1 of the indole with an amino moiety or with a (hetero) cycloaliphatic ring useful as 5-HT-6 modulators.

D1, which is regarded as being the closest prior art, discloses 5-HT-6 modulators which are also sulfonamide indoles. The main differences between the present compounds and the compounds disclosed by D1 are the positions of substitution with the sulfonamide moiety and -(CH2)n-R1 substituent on the indole ring (see present Claim 1 and the Claim 1 of D1).

The problem underlying the present invention cannot be regarded in providing further sulfonamide indoles useful as to treat diseases modulated through the 5-HT-6 receptor, for the following reasons:

D2 discloses 5-HT-6 modulators, which are 4-sulfonamidoindole derivatives (see compounds of formula (le)(page 5 and Claim 6 of D2).

D4 disclose indoles which can be substituted with a sulfonamide moiety in any one of the positions 4-7 of the indole and which are useful to treat the same diseases as in the present case. Though D4 does not specifically disclose the role of 5HT-6 receptors, it clearly discloses the same application in terms of disorders to be treated. The possible discovery of a specific mechanism cannot be taken as an objective problem and eventually an inventive step as such.

The present general structures (Ia) differ from the compounds disclosed by D1 only in the positions of substitution with the ASO2N- and -(CH2)n-R1 moieties on the indole ring. D2 teaches that compounds substituted in position 4 with a sulfonamide function are useful as 5-HT-6 modulators. D3 discloses 5-HT-6 modulators, which can be substituted with a cycloalkyl moiety on the nitrogen of the indole ring (see e.g. examples 23, 28, 67 of D3) as for the present case.

Having regard the minor modifications between the present compounds and the D1 compounds and in view of the D2-D4, the skilled person would have expected that the same qualitative effect would be maintain in such similar compounds. Moreover, the present R1 substituent can present very different chemical structures and therefore seems not to be relevant for retention of the claimed activity for the present compounds.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/008513

The problem underlying the present application should thus be seen in providing of sulfonamide indole derivatives with unexpected or surprising effects compared to those of the closest prior art. An inventive step cannot be recognized as it is not yet shown by appropriate information, e.g. in form of experimental data, that substantially all the claimed compounds have un unexpected property or improved activity over the structurally closest prior art compounds (D1), which is attributable to the distinguishing feature of the invention.
